Good to know

Restropi works in any modern browser (Chrome is best). On a phone, open the menu of your browser and tap “Add to Home screen” to open Restropi like an app.

01 Welcome to Restropi

What Restropi does and who signs in how

Restropi runs your café or restaurant from the phone, tablet or laptop you already have: billing with GST and UPI QR, orders to the kitchen, tables, QR ordering, stock, staff and reports. Everything is saved online, so every device sees the same orders live.

Who signs in, and how

- **Owner** — signs in with email and password at the login page. The first time, you set your own password. The owner can see and change everything.
- **Sub admin (manager)** — runs one or more outlets. Signs in with a 4-digit PIN.
- **Staff** (captain, cashier, chef…) — signs in with a 4-digit PIN and sees only what the owner allows.
- **Guests** — no login. They scan the table or counter QR, see your menu, and order and pay from their phone (Growth plan and above).

GOOD TO KNOW

Restropi works in any modern browser (Chrome is best). On a phone, open the menu of your browser and tap “Add to Home screen” to open Restropi like an app.

CAREFUL

Restropi needs internet to save orders and bills. Keep Wi-Fi or mobile data on at the counter.

02 Your first day: set up in 6 steps

UPI, GST, menu, tables, staff, first order

Your home screen shows **Get your restaurant ready** with these steps. Each one opens the right screen.

1. **Set your password.** Sign in with the temporary password Restropi gave you and choose your own.
2. **Add your UPI ID** — Settings → Payments → “UPI ID for QR payments” (like name@okaxis). Tap “Test QR” and scan it with your UPI app to check the name is right.
3. **Check the details on bills** — Settings → Details on bills: name, address, phone, GSTIN, FSSAI, the message at the bottom of the bill, and **GST on bills** (0%, 5%, 12% or 18%).
4. **Add your menu** — Menu → Add category, then Add dish. Or tap **From photo** and take pictures of your printed menu.
5. **Set up your tables** — Tables → Manage tables. Then tap **QR codes** to print a QR for every table.
6. **Add your staff** — Members & access → Add member: name, mobile, role, outlet, what they can do, and a 4-digit PIN. Then send them the **Staff sign-in link**.

Now take your first order from **New order**.

03 Plans: what is included

Prices, outlets, staff and features in each plan

Prices are **per outlet, per month, plus 18% GST**. A locked item in the menu (🔒) is part of a higher plan; the owner can tap it to see the upgrade.

	Starter	Growth	Pro	Chain
Price / month	₹699	₹1,999	₹2,999	On call
Outlets	1	1	Up to 3	4 or more
Staff logins (besides owner)	3	Unlimited	Unlimited	Unlimited

Paying for longer

- **Monthly** — Starter ₹699, Growth ₹1,999, Pro ₹2,999 per outlet.
- **6 months, 1 month free** — you pay for 5 months: Starter ₹3,495, Growth ₹9,995, Pro ₹14,995 per outlet.
- **1 year, 2 months free** — you pay for 10 months: Starter ₹6,990, Growth ₹19,990, Pro ₹29,990 per outlet.

Renew or change your plan

1. Tap **Renew** on the red reminder, or go to Settings → Your plan.
2. Choose the plan and how long. Enter a plan coupon if you have one.
3. Pay the total by UPI from the QR shown, then tap the green WhatsApp button. Your request goes to Restropi with all the details.
4. Restropi checks the payment and turns the plan on, usually within a few hours on working days.

> **GOOD TO KNOW**
> The reminder starts 10 days before your plan ends. If a plan ends, billing and the QR menu pause, but your data stays safe. Renew to turn everything back on.

04 Taking an order (New order)

Dine-in, counter, delivery, notes, voice, send to kitchen

1. Open **New order**.
2. Choose **Dine-in**, **Counter** (or Takeaway) or **Delivery** at the top of the cart.
3. Dine-in: tap the table box and pick the table. On a shared table, pick the party (A, B…) or “+ New party”. For a new party, tap how many **Guests** (1–6, or 7+) — it is needed before sending. Counter or delivery: you can type the guest's name.
4. Tap dishes to add them. Search at the top, or pick a category. Dishes with choices (size, spice, add-ons) open a small sheet first.
5. Tap “Add note” under a dish for the kitchen (Less spicy, Jain, Pack separately…). Use − and + to change the quantity.
6. Tap **Send to kitchen**. The order goes to the Kitchen screen and Orders, on every device.

You can keep adding to the same table later: open the table and tap **Add to order**. Each round goes to the kitchen as its own ticket, and the table has one running bill.

Voice ordering (Pro)

Tap **Speak** and say the order, for example “two masala dosa, one cold coffee”. Check the dishes it found, then add them. Works best when you use dish names as they are on your menu.

> **GOOD TO KNOW**
>
> **Charge** appears only for people allowed to “Charge bills”. Captains usually only send orders; the cashier charges.

05 Charging a bill

UPI, cash, card, UPI + cash, split, discounts, e-bill, print

Tap **Charge** (in New order, on a table, or on an order card). The bill shows items, discount, CGST, SGST and round-off.

Ways to pay

- **UPI** — a QR for the exact amount appears. The guest scans it with any UPI app; the amount fills in by itself. Tap “Payment received” once you see the money.
- **Cash** — tap the note the guest gave (Exact, ₹500…). Restropi shows how much change to give back.
- **Card** — take the payment on your card machine, then tap “Card approved”. (Turn this on in Settings → Payments → Card machine.)
- **UPI + Cash** — part by UPI, part in cash. Enter the two amounts; they must add up to the bill.
- **Split by guest** (Growth, restaurants) — splits the bill equally. Tap each guest when their share is paid.

Discounts and coupons

- Tap **5% off**, **10% off** or **Custom** (any % or ₹ amount).
- Type a guest's **coupon code** and tap Apply (Growth and above).
- Only people allowed to “Give discounts” see these buttons. Every discount shows in reports.

Guest name and mobile

Type the guest's name and 10-digit mobile at the top of the bill (optional). The guest is saved in **Guests** with the bill amount, so you can thank them or send offers later.

After payment

- **Send e-bill on WhatsApp** — type the number and tap Send. WhatsApp opens with the full bill typed in.
- **Share bill as PDF** — on a phone, pick WhatsApp in the share menu; on a computer, the PDF downloads.
- **Print receipt** — prints a tax invoice sized for 80 mm receipt printers (or any printer connected to the device).

06 Payment confirmation by the owner

Why some bills say “waiting for confirmation”

To stop money going missing, a bill marked paid by staff (or by a guest from their phone) is **not closed straight away**. It waits for the owner — or a manager the owner trusts — to check that the money really came in.

1. Staff charge the bill as usual. The screen says **Sent for confirmation**. The table stays busy.
2. The owner gets a ping: sound, a pop-up, the 🔔 bell and **Needs you now** on the home screen. The order card shows “Paid? Confirm”.
3. Check your UPI app or the cash drawer, then tap **Money received**. The bill closes and the table becomes free.
4. If the money didn't come, tap **Not received**. The bill opens again so it can be collected.

> **GOOD TO KNOW**
> Bills the owner charges close at once. To let a manager close bills without waiting, tick **Confirm payments** for them in Members & access.

A bill was marked paid by mistake

Only the owner can undo it: Orders → **Paid today** → open the bill → **Mark unpaid** → type your password. The bill (and its table) opens again and the change is saved in Activity.

Wrong payment method

Orders → Paid today → open the bill → **Change how it was paid** (needs the “Change how a bill was paid” permission). The total stays the same; every change is logged with the person's name.

07 The Orders screen

Every order as a card, with the one next step

Each order is a card: where it is (table, counter, delivery or QR), the order number, how long ago, the items, the amount, its stage and **one big button for the next step**.

Stage	What it means	Next button
New	A QR order waiting for staff	Accept & send to kitchen
Accepted	In the kitchen queue	Mark cooking
Cooking	Being made	Mark ready
Ready	Ready to serve or hand over	Mark served
Served	With the guest, not paid yet	Charge
Paid? Confirm	Marked paid, waiting for the owner	Money received

Use the tabs **Open**, **To confirm**, **Online & QR**, **Ready to serve** and **Paid today**. Tap a card for all details, payment history, printing or cancelling.

> **CAREFUL**
> Cancelling an order that was already accepted needs the “Cancel orders after they are accepted” permission. The guest sees on their phone that the order was not accepted.

08 Tables (restaurants)

Add tables, print QR, seat, share, move, merge

Add tables and print QR codes

1. Tables → **Manage tables** → add one table or many at once (T1 to T20), with the area (Indoor, Terrace…) and seats.
2. Tap **QR codes** → **Print**. Each table gets its own QR with the Restropi “R” in the middle. Stick it on the table.

> **GOOD TO KNOW**
> A table QR never changes. You only print it once.

Colours

- **White** — free
- **Blue** — guests seated
- **Green** — ordered, eating
- **Amber** — asked for the bill, or a new QR group to accept
- A red time means the table has been busy for over an hour.

Everyday actions

- **Seat guests** — tap a free table → Seat guests → number of guests.
- **Share a table** — tap a busy table → “Share table · seat another party”. Each party (A, B…) gets its own order and bill.
- **Move** — moves a party and its orders to another table.
- **Merge** — two parties at one table become one bill.
- **Accept a QR group** — when new guests order from the table QR, an amber card asks you to check they are seated. Tap Accept to send their order to the kitchen, or Reject.
- **Charge** — shows the bill with GST for that party.

09 Kitchen screen (KOT)

Tickets for the kitchen on any phone or tablet

Put a phone or tablet in the kitchen and open **Kitchen**. Every accepted order appears as a ticket with the table, the order number, the captain's name and minutes waiting.

1. Pick a station at the top (Kitchen, Tandoor, Bar, Dessert) or keep **All stations**. Each dish's station is set in the menu.
2. Tap **Start cooking**. Tick each dish as it's done.
3. Tap **Mark ready** — waiters see it in Orders under “Ready to serve”.
4. After serving, tap **Served · clear ticket**.

- **To cook** at the top adds up the same dish across all tickets (e.g. “6 Masala Dosa”).
- **Read orders aloud** speaks each new ticket and plays a chime — handy when the cook's hands are busy.
- Tickets over 20 minutes turn red.

10 QR ordering for guests (Growth and above)

What guests see and do, and how you control it

What the guest does

1. Scans the table QR with the phone camera — no app to install. First they choose **how many guests** are at the table (1–8, or more); they can change it later with the 👥 button at the top. Then your menu opens.
2. Browses categories on the left, searches, or uses Filters (veg / non-veg, spicy or sweet, price, specials). Can switch the menu to Marathi.
3. Taps ADD on dishes, then **View cart** → **Place order**. The first time, they type their name and mobile number.
4. A new group's first order waits for your staff to accept. After that, more orders go straight to the kitchen.
5. Tracks the order (Accepted → Being prepared → Ready) under **My orders**.
6. Taps **Pay ₹…** (the bill amount is on the button), can add a tip, and pays by **UPI** (exact-amount QR), **Cash**, **Card** or **Cash + UPI**.

When the guest pays by UPI from the phone, the button changes to **Already paid · Confirming with owner** and you get a ping to confirm. Once you tap Money received, the guest sees **Bill paid** and no pay buttons.

Sharing a table

If someone is already at the table, the next phone is asked: **“Yes, we're together”** (same bill) or **“No, we're a separate group”** (own bill). No codes to type.

Cafés: counter QR and token

With “Guests pay first” on, the guest pays before the kitchen starts and gets a **token number**. Cash or card at the counter: your staff accept the order once paid.

You stay in control

- Settings → Ordering → **Pause QR orders now** (busy, closing). Guests can still see the menu.
- **Take QR orders only in these hours** — set open and close times. Closing after midnight works too.
- Dishes marked sold out can't be ordered.

> **GOOD TO KNOW**
> On the Starter plan the QR shows your menu only; guests order with staff.

11 Menu

Categories, dishes, photos, choices, sold out, menu from photo

Categories

Menu → Categories → Add category (with an emoji icon). The order you set here is the order guests see on the left of the QR menu.

Add or edit a dish

- **Dish name** and **Price** (before GST).
- **Veg, non-veg or egg** — shows the green / red / brown mark.
- **Cooked at** — Kitchen, Tandoor, Bar or Dessert (which kitchen screen shows it).
- **Cost per plate** — used for profit and dish costing.
- **Choices for guests** — spice level, size, add-ons with extra price; mark a choice as required.
- **Labels** — Bestseller, Chef special… (also the “Specials” filter), how spicy, sweet, description and photos.
- **Available** switch — turn off to show “Sold out” everywhere at once.

Menu from a photo

1. Menu → **From photo** → take or pick up to 6 clear photos of your printed or handwritten menu.
2. Restropi reads categories, dishes, prices and veg / non-veg. Check everything; untick anything you don't want; fix prices.
3. Tap Save. New categories are made; dishes already on your menu are left as they are.

> **GOOD TO KNOW**
> Up to 20 photos per restaurant per day. Take photos in good light, flat, one page per photo.

What's working (Pro)

Puts each dish in one of four groups — **Stars** (popular and profitable), **Workhorses** (popular, thin margin), **Hidden gems** (profitable, few orders) and **Rethink** (low on both) — with what to do for each.

12 Stock (Growth and above)

Items, received, used, wasted, count, to buy

1. Stock → **Add item**: name (Paneer), unit (kg, L, pcs), minimum level, cost per unit and supplier.
2. When goods arrive, tap the item → **Received** and the quantity.
3. Record **Used** and **Wasted** during the day. You can't use or waste more than you have.
4. Once a week (or at closing) do a **Count**: enter what's really there. This corrects the stock.

The **To buy** tab shows everything below its minimum, grouped by supplier, with the approximate cost. Tap **Send on WhatsApp** to send the supplier a ready order message.

Tomorrow's prep (Pro) lists how many plates of each dish to expect tomorrow, based on the same weekday over the last four weeks.

> **CAREFUL**
> If the app says you can't use more than the stock, the stock number is wrong — do a **Count** first, then record the use.

13 Staff, outlets and access

Roles, permissions, PINs, sign-in link, outlets

Add a member

1. Members & access → **Add member**.
2. Enter name and 10-digit mobile. Choose the role: **Staff** or **Sub admin** (manager of an outlet).
3. Pick the outlet(s). Start from a ready job (Captain, Cashier, Chef, Counter staff, Outlet manager) and change the ticks if you like.
4. Set a **4-digit PIN** and tap Add member. Then send them the sign-in link on WhatsApp.

Staff sign-in link

At the top of Members & access there is the **Staff sign-in link** with Copy and WhatsApp buttons. Staff open it once on their phone or tablet, tap their name and enter their PIN. After that the device remembers your restaurant.

What each permission allows

Permission	Allows
Take orders	New order screen
See and accept orders	Orders screen, accept QR orders, order pings
Charge bills	The Charge button
Tables	Tables screen
Kitchen orders (KOT)	Kitchen screen
Give discounts	Discount and coupon buttons on the bill
Cancel orders after they are accepted	Cancel order
Change how a bill was paid	Fix the payment method of a paid bill
Confirm payments	Close bills without the owner's OK; confirm others' payments
Edit menu and prices	Menu, menu from photo
Stock and purchases	Stock screen
Manage staff and their access	Members & access (sub admins: only their outlet's staff)
Outlet settings	UPI, GST, bill details, QR ordering
Guests and reviews / Campaigns / Insights / Reports	Those screens
Activity log	Who did what

- **Forgot PIN** — open the person and type a new PIN.
- **Someone left** — turn off “Can sign in” (keeps their history) or Remove from team.
- **5 wrong PIN tries** lock that person for 5 minutes.
- **Team** shows orders taken by each person today or in 7 days.

More than one outlet (Pro: up to 3; Chain: 4 or more)

Members & access → **Add outlet**: name, address, Restaurant or Café, UPI ID. Switch outlet from the box at the top of the menu. Each outlet has its own tables, settings and UPI; reports are per outlet.

14 Guests, feedback, campaigns and coupons (Growth and above)

Your guest book and WhatsApp offers

A guest is added to **Guests** when they order from the QR (they give a name and mobile), or when staff type the name and mobile while charging. Each guest shows visits, total spend, last visit and bills.

After paying from the QR, guests can rate the visit. Ratings and comments show under **Latest feedback**; 3 stars or less are marked “Needs a look”.

WhatsApp campaigns

1. Campaigns → choose who gets it: everyone, regulars (3 or more visits), not seen for 30 days, or only guests who agreed to offers.
2. Write the message. {name} becomes each guest's first name. Add a coupon with one tap.
3. Tap a guest: WhatsApp opens with the message ready. Press send there.

> **GOOD TO KNOW**
>
> Messages go from your own WhatsApp number. For offers, choose “agreed to offers” — guests tick this when they first order from the QR.

Coupons

Campaigns → **Coupons** → New coupon: code, % or ₹ off, maximum discount, minimum bill, last date, maximum uses, on/off. Share it on WhatsApp. Staff type the code while charging; each use is counted.

15 Home, reports, insights and activity

Today's numbers, Excel and PDF reports, who did what

Home (Pulse)

Needs you now lists QR orders to accept, bills asked for and payments to confirm. **Restropi Pulse** (Growth) sums up today in one line. Below: today's sales, orders, average bill, unpaid amount, orders by hour, last 7 days, bestsellers and where orders came from.

Reports

- Choose **Today**, **7 days**, **30 days** or **Custom** dates.
- See sales, paid bills, average bill, GST, sales by day, how guests paid, top dishes, categories and GST split.
- Download Excel files: **Bills**, **Item-wise**, **Day-wise**, **GST summary** — each with date, day, taxable value, CGST and SGST.
- **Build report** — tick what you want (11 sections), filter by payment method, order type or staff, and get a designed **PDF** or one **Excel** file.
- **WhatsApp / Share** — sends a short summary to your partner or accountant.

> **GOOD TO KNOW**
> Reports count only bills that are paid (and confirmed). Bills waiting for confirmation are not in sales yet.

Insights and Leak guard (Pro)

Shows the busiest hour, best day, dishes not sold in 14 days and **money to check**: cancelled orders, short payments, changed bills and old open bills — with who did them.

Activity

Every important action with the person and time: orders, payments and confirmations, tables seated and freed, price changes, stock, settings and staff changes. Filter by date, person or type, and download as Excel.

16 Settings

Bill details, GST, UPI, ordering, password, export

Setting	What it does
Details on bills	Name, address, phone, GSTIN, FSSAI, opening hours, bill message, GST on bills (0 / 5 / 12 / 18%)
Payments	UPI ID for every payment QR (with a test QR); card machine on or off
Ordering	Restaurant or café, tables and counter both, guests pay first, QR ordering hours, pause QR orders
Your plan	Plan, end date, renew or change
Outlets, members & access	Opens Members & access
Password and sign-in	Change password; sign out on every device
Export your data	Download orders, dishes and guests as Excel (CSV) any time

Language: tap your name (bottom-left on a computer, top-right on a phone) and choose **English, मराठी or हिंदी**. Menus and headings change language.

> **GOOD TO KNOW**
>
> If a phone is lost, sign in on another device → Settings → Password and sign-in → **Sign out on every device**, then change your password.

17 Notifications

Never miss a new order or payment

- A new order from another phone, the QR, a bill request or a payment to confirm plays a **sound**, shows a **pop-up** and adds a line to the 🔔 **bell** at the top.
- Tap **Turn on** when Restropi asks, to also get phone or computer notifications when the app is in the background.
- Keep Restropi open on the counter device, with the volume up.

> **GOOD TO KNOW**
>
> On iPhone, notifications work after “Add to Home Screen” and opening Restropi from there.

18 Your data and safety

How your data is kept safe

- Your data is stored online on secure servers, not on one phone. A lost phone doesn't lose your sales.
- Each restaurant sees only its own data. Staff see only their outlets and the screens you allow.
- Owner passwords are encrypted; staff PINs are stored as secure codes and lock after 5 wrong tries.
- Payment confirmation, “Mark unpaid” with password, and the activity log protect you from mistakes and misuse.
- Guests can't change prices or items of an order from their phone.

19 Common problems and answers

UPI, PIN, table, GST, printer…

Orders

I don't hear or see new orders.

Keep Restropi open with the volume up, and tap **Turn on** when it asks about notifications (or allow notifications for the site in your browser settings). New orders also show in the 🔔 bell and on Home under Needs you now. On iPhone, add Restropi to the Home Screen first.

A wrong order went to the kitchen.

Orders → open the order → **Cancel order** (needs the cancel permission after the order is accepted). Then take the correct order. Cancellations show in Insights and Activity.

Billing & payments

The UPI QR doesn't show, or shows the wrong name.

Settings → Payments → enter the UPI ID exactly as in your UPI app (like name@okaxis). Tap **Test QR** and scan it — the name your bank shows must be your business. Save.
An email address (like name@gmail.com) is not a UPI ID — open your UPI app → Profile to find it.

The guest paid by UPI but the bill / table is still open.

It's waiting for confirmation. Check the money in your UPI app, then tap **Money received** (on the order card, the table, the 🔔 bell or Needs you now). The bill closes and the table becomes free.

My cashier charged a bill but it says “Sent for confirmation”.

That is the payment check. The owner confirms with **Money received**. To let a trusted manager close bills alone, tick **Confirm payments** for them in Members & access.

A bill was marked paid by mistake.

Owner only: Orders → **Paid today** → open the bill → **Mark unpaid** → enter your password. The bill and its table open again. It's saved in Activity.

The bill was paid by cash but saved as UPI (or the other way).

Orders → Paid today → open the bill → **Change how it was paid** → fix the amounts → Save. The total must stay the same. The change is logged with your name.

A staff member doesn't see the Charge or discount buttons.

They don't have that permission. Members & access → the person → tick **Charge bills** and/or **Give discounts** → Save access.

After “Payment received” the screen went back to Charge.

This was a bug in an older version and is fixed. Refresh the app (close and open it again). If you see it again, send us a screenshot.

GST is wrong, or I'm not registered for GST.

Settings → Details on bills → **GST on bills**: 0% (not registered), 5%, 12% or 18%. New bills use it at once. Bills already paid don't change.

How do I print bills? Which printer?

Tap **Print receipt** after payment, or Print bill on an order. Your browser's print window opens; choose your printer. Bills are sized for 80 mm receipt printers and also print on A4. Any printer installed on that phone, tablet or computer works (USB, Wi-Fi or Bluetooth printers that the device can print to).

Tables

Tables (or orders) take long to appear, or show a loader.

The first time on a device Restropi loads everything from the server; after that the screen opens at once from the last copy and refreshes in a moment.
If it keeps loading: check the internet, then pull down or reload the page. If you just changed your plan, sign out and sign in once.

Two different groups are at one table.

Tap the table → “Share table · seat another party”. Each party (A, B) gets its own order and bill. From the QR, the second phone taps “No, we're a separate group”.

Guests moved to another table.

Tap the table → **Move** → pick the new table. Their orders and bill move with them.

QR ordering

Guests scan the QR and see “This QR code isn't active”.

Usually: the plan has ended or the restaurant is paused (renew in Settings → Your plan), the table was removed, or the QR is from a different outlet. Print the QR again from Tables → QR codes.

Guests can see the menu but there's no ADD button.

One of these: QR ordering is paused (Settings → Ordering → Pause QR orders), it's outside your QR ordering hours, the dish is sold out, or your plan is Starter (QR shows the menu only — ordering from the table is in Growth).

A QR order is stuck at “Waiting for staff to accept”.

The first order from a new group waits so staff can check the guests are really seated. Tables → the amber card → **Accept** (or Orders → **Accept & send to kitchen**).

Kitchen

The Kitchen screen doesn't show an order.

QR orders appear after staff accept them. Check the station at the top is **All stations** or the right one — each dish's station is set in the menu (Cooked at).

Menu

Menu from photo didn't read my menu well.

Use clear, flat photos in good light, one page per photo, up to 6 at a time (20 per day). Check and fix prices before saving. If it says the reader is busy, try again after a minute.

Stock

Stock says I can't use more than I have.

The stock number is lower than what's really there (a delivery wasn't entered as Received). Tap the item → **Count** → enter the real quantity. Then record the use.

Staff & access

My staff can't see the PIN screen on their phone.

That device doesn't know your restaurant yet. Members & access → **Staff sign-in link** → send it on WhatsApp. They open it once, tap their name and enter the PIN. (Or the owner signs in once on that device.)

A staff member forgot their PIN, or is locked out.

Members & access → tap the person → type a new 4-digit PIN → Save access.
After 5 wrong tries the person is locked for 5 minutes; wait and try again.

Reports

Report sales don't match my cash drawer.

Reports count paid and confirmed bills only, by the time the order was taken. Check **To confirm** in Orders, payments marked with the wrong method, and the date range. Download the **Bills** Excel to compare bill by bill.

The Excel file shows strange characters.

Files are saved as UTF-8 for Excel and Google Sheets. Open them in Excel or Google Sheets (not Notepad). If you still see them, download the file again from the latest app.

Plans

I can't add more staff.

The Starter plan allows 3 staff logins besides the owner. Turn off someone who left, or upgrade to Growth for unlimited staff.

A screen shows a lock 🔒 or "Part of the Growth / Pro plan".

That feature is in a higher plan. The owner can tap **Upgrade** to see the price and send the request. Section 3 of the manual lists what each plan has.

How do I renew or change my plan?

Tap **Renew** on the reminder, or Settings → Your plan. Pick the plan and period, pay by UPI from the QR, then tap the WhatsApp button. Restropi turns it on after checking the payment.

Account & data

I forgot my owner password.

On the login page, choose **Owner** → **Forgot password?** → enter your email. Open the link in the email (check Spam) and set a new password. The link works once and for a short time.

How do I change the language?

Tap your name (bottom-left on a computer, top-right on a phone) and pick English, मराठी or हिंदी. Guests can switch the QR menu to Marathi with the button at the top.

A phone with Restropi was lost.

Your data is safe online. Sign in on another device → Settings → Password and sign-in → **Sign out on every device**, then change your password. For staff, change their PIN in Members & access.

Does Restropi work without internet?

No — orders and bills are saved online so every device stays in step. Use a stable Wi-Fi or keep mobile data as a backup at the counter.

Can I get a copy of all my data?

Yes. Settings → **Export your data** → download orders, dishes and guests as Excel (CSV) any time.

Still need help?

Write to us with your restaurant name and a screenshot. We reply the same working day.
